**Liu Wangyu, PhD**

- Professor of South China University of Technology

**Claudio R. Boër, PhD**

- Vice-President of the Board, SUPSI, University of Applied Science of Southern Switzerland
- Senior Advisor of swissnexChina

University of Applied Sciences and Arts  
of Southern Switzerland  
**SUPSI**

The application scope of this book: can be used as the teaching materials of undergraduate or college, higher vocational college students, as well as the self-study reference books.

Suitable for: mechanical engineering, mechanical and electrical engineering, vehicle engineering, material processing engineering and other related majors.

This book was recommended by:

- **Geng Wenbing**, H.E. Ambassador Extraordinary and Plenipotentiary of the People's Republic of China to the Swiss Confederation Berne
- **Bernardino Regazzoni**, Ambassador of Switzerland to China
- **Manuele Bertoli**, State Councillor of the Republic and Canton Ticino, Director of the Department of education, culture and sports
- **Giorgio Masiero**, Professor, Vice-president of HumaniTech Network

This English textbook is a basic professional textbook for undergraduates aiming at international talent cultivation on the basis of taking into account similar Chinese teaching materials and curriculum systems in China. Compared with similar foreign textbooks, the knowledge system and content of this textbook take into account the inheritance of domestic curriculum system, so that it is better and more convenient for teaching and learning. In addition, compared with current similar textbooks in China and abroad, the content and system of this textbook have been better integrated and updated.

This textbook has seven chapters, respectively introduces: the metal cutting tool, the metal cutting theory, the process planning, the machine tool, the design of jigs and fixtures for typical machine tools, the machining accuracy, the qualities of machined surface. Each chapter includes the introduction and explanation of concepts, the introduction and analysis of cases, and the transition from theory to practice. At the end of each chapter, there is a summary of cutting-edge development to help the students to expand their knowledge. In addition, there are some exercises after each chapter to facilitate the students to review after class.
